

EXCELLENT-REGISTRY

Efficacy of **X**ience/Promus versus **C**ypher to **rE**duce **L**ate **L**oss in **stENT**

Hyo-Soo Kim MD, PhD, FAHA

on behalf of the investigators

Seoul National University Hospital, Seoul, Korea

Background

Everolimus-Eluting Stent

- EES has been shown to be superior to PES with regard to angiographic and clinical endpoints.

Sirolimus-Eluting Stent

- SES has been known to be the most efficacious DES regarding inhibition of neointima and LL

Everolimus is the 40-o-(2-hydroxyethyl) derivative of sirolimus targeting mTOR

- | | |
|---|--|
| • Thinner fluoropolymer (7.8 μm) | • EVA:BMA copolymers (13.7 μm) |
| • Thinner strut thickness (81 μm) | • strut thickness (140 μm) |
| • Cobalt–chromium alloy platform | • Stainless steel |

Background

- EES was **non-inferior** to SES in inhibition of LL after stenting, which was corroborated by similar rates of clinical outcomes in **EXCELLENT RCT**.

J Am Coll Cardiol 2011;58:1844-54

- This study was performed to compare efficacy and safety of EES with SES in the **unselected all-comer** group of patients subject to real clinical practice.

Methods

2006.1 ~ 2008.5: SES
2008. 6 ~ 2010.5: EES
5159 Patients enrolled
from 29 centers in Korea

EES
N=3056

SES
N=2103

EES
N=1568

Propensity
Score
Matching

SES
N=1568

Propensity Score Matching

- **c-statistics 0.62**
- **Gender, Age, BMI**
- **Clinical diagnosis : STEMI, NSTEMI, unstable angina, stable angina, silent ischemia**
- **Disease extent : 1VD, 2VD, 3VD**
- **Lesion length : >28mm**
- **Risk factor : DM, CRF, dyslipidemia, hypertension, pph. vascular disease, MI, CHF, CVA, valve disease, family Hx of CAD, previous PCI, previous CABG**
- **Medication : aspirin, clopidogrel, beta blocker, statin, ACE inhibitor, ARB, calcium channel blocker, insulin**

Study Endpoints

- **Primary Endpoint :**
 - : Target Lesion Failure (TLF) at 12 months**
 - Cardiac death
 - Target vessel related myocardial infarction (MI)
 - Ischemic driven Target Lesion Revascularization (TLR)
- **Secondary Endpoints:**
 - In-stent & In-segment Late Loss at 9 months
 - Stent Thrombosis
 - Target Vessel Failure at 12 months (composite of cardiac death, MI, and TVR)
 - Any death, cardiac death, MI, TLR, TVR at 30 days, 9months, 1 year
 - Composite rate of cardiac death and any MI
 - Composite rate of all death and any MI
 - Composite rate of all death, any MI (Q-wave and non Q-wave) and any repeat revascularization
 - Compliance and therapy interruptions with prescribed adjunctive antiplatelet therapy
 - Clinical device and procedural success

Cases of Stent Thrombosis in whole patients N=5159

- Acute (<1 day) : 7 patients
- Subacute (1~30days) : 19 patients
- Late (>1month) : 6 patients
 - 5 patients : **dual-antiplatelet**
 - 1 patient : **only clopidogrel** after 1 month d/t aspirin intolerance
- Clopidogrel stop patient → **no ST**
 - 1~3months : 43 patient
 - 3~6months : 38 patients
 - 6~9months : 99 patients
 - 9~12months : 76 patients

Summary : EXCELLENT-REGISTRY

- Up to one year post-PCI in an **all-comer** population, the efficacy and safety of EES was not significantly different with SES.
- **Propensity score-matched pairs** showed same results as whole patients.
- The incidence of **ST** was not different between EES and SES although numerically lower in EES.
- **TVR** were significantly more frequent in SES than EES.
- Long term follow up will tell us whether Xience/Promus will offer **similar efficacy along with better long term safety** compared with the best 1st generation DES, Cypher.

EXCELLENT -REGISTRY

Efficacy of **X**ience/Promus versus **C**ypher to **rE**duce **L**ate **L**oss in **stENT**
