Thrombotic complication

IPST in CHAMPION PHOENIX

STEMI Primary PCI: usual day practices

Mid-RCA total

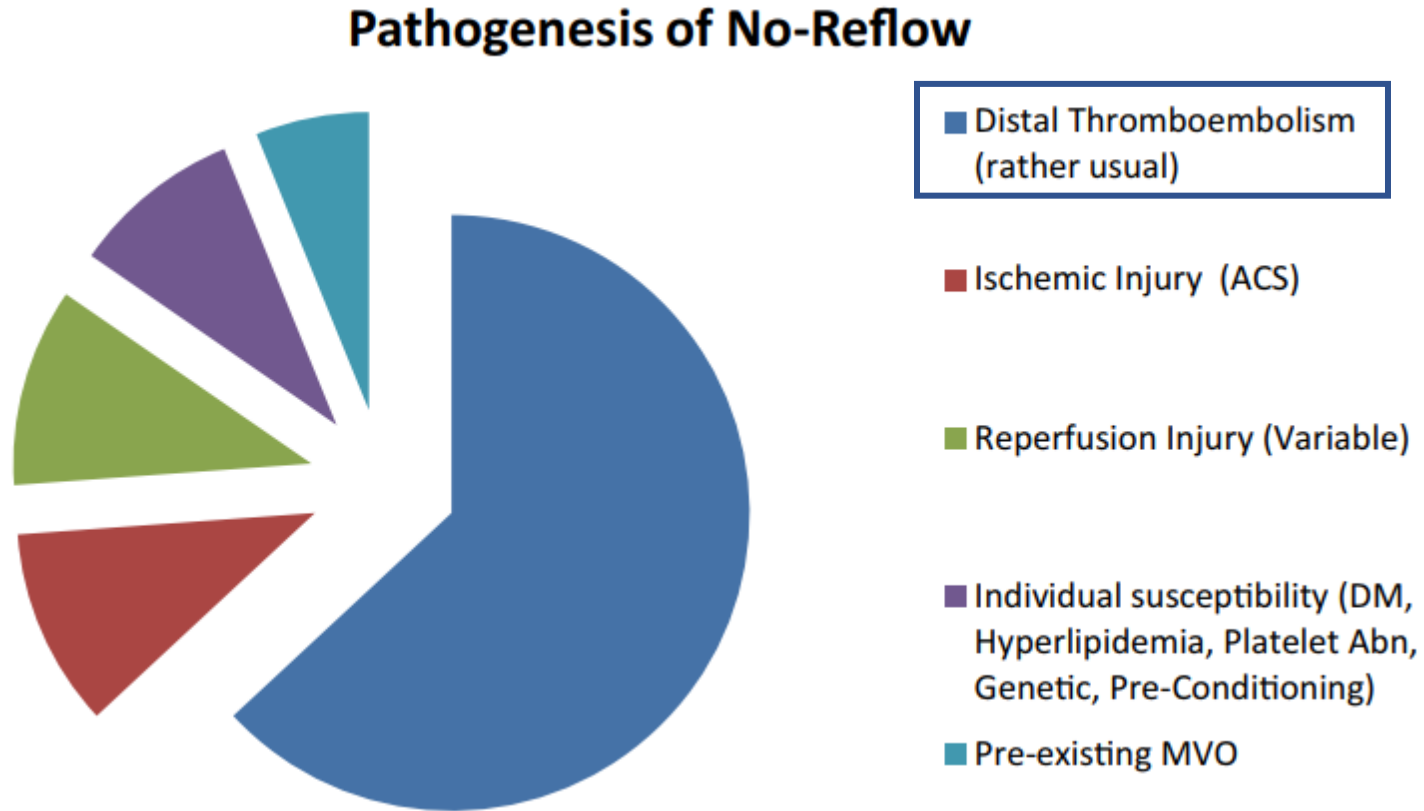

After balloon inflation: TIMI3

Post stent: No reflow

Pathogenesis of No-Reflow

Niccoli G, Burzotta F, Galiuto L, Crea F. Myocardial no-reflow in humans. J Am Coll Cardiol. 2009;54:281–292.

Procedural Thrombotic complication prevention during primary PCI

- Avoid long stent, stent overlap, high pressure inflation.
- Direct stent
- Deferred stent (large thrombus)
- Intracoronary thrombectomy

De Luca g et al. A meta-analytic overview of thrombectomy during primary angioplasty, *Int J Cardio*. 2013;166(3) 606-612

Iakovou I et al. *JAMA* 2005; Finn A et al. *Circulation* 2005; Airoldi F et al. *Circulation* 2007

Freixa X et al. Immediate vs delayed stenting in acute myocardial infarction: a systemic review and meta-analysis. *EuroIntervention*. 2013;8:1207-1216

2013 ACCF/AHA Guidelines^a and 2012 ESC/EACTS Guidelines^b for STEMI

Manual aspiration thrombectomy is reasonable for patients undergoing primary PCI.

Routine thrombus aspiration should be considered during primary PCI.

a. O'Gara PT, et al. *J Am Coll Cardiol*. 2013;61:e78-e140.^[2]

b. Steg PG, et al. *Eur Heart J*. 2012;33:2569-2619.^[7]

Reperfusion Markers: Thrombectomy

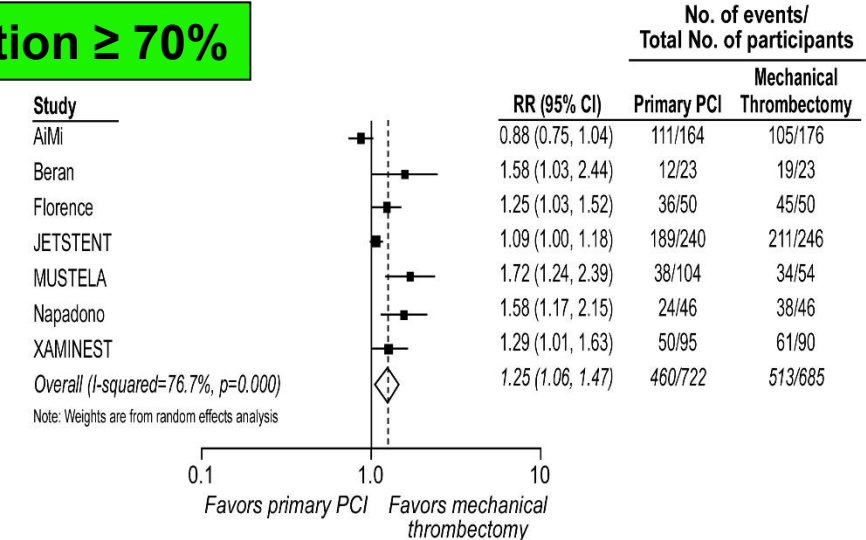

Aspiration

Mechanical

TIMI Blush Grade 3

ST- resolution ≥ 70%

TOTAL Trial (Primary outcome)

Thrombus aspiration complication case

57/M. STEMI 2hr. prox LAD in-stent thrombosis (1/2)

During LAD aspiration: Cardiogenic shock(2/2)

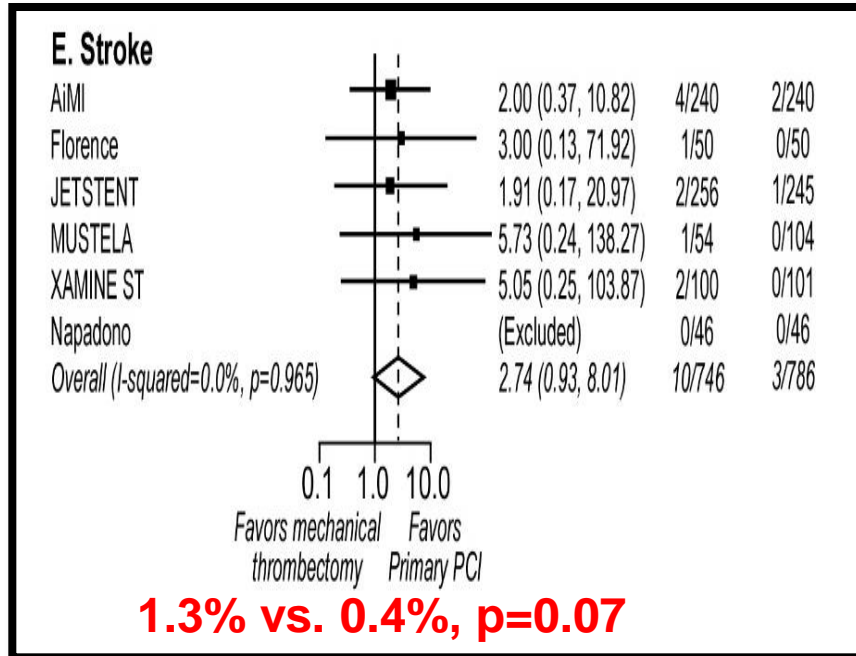

Suddenly, The patients' BP was dropped to 80mmHg, and hypoxia was developed.

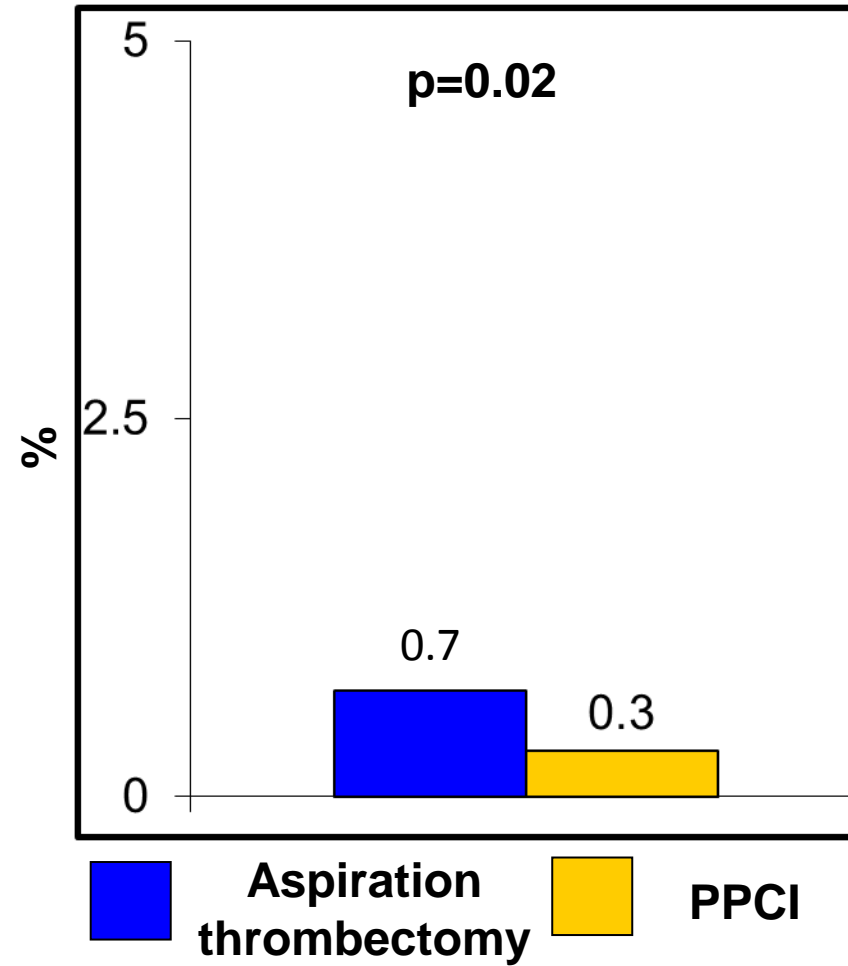

Mechanism: incomplete catheter aspiration after TA

Stroke Risk: Thrombectomy

Mechanical thrombectomy

TOTAL: Aspiration thrombectomy

CHANGE IN RECOMMENDATIONS
2012 2017

Radial access^a	MATRIX ¹⁴³
DES over BMS	EXAMINATION ^{150, 151} COMFORTABLE-AMI ¹⁴⁹ , NORSTENT ¹⁵²
Complete Revascularization^b	PRAMI ¹⁶⁸ , DANAMI-3-PRIMULTI ¹⁷⁰ , CVLPRIT ¹⁶⁹ , Compare-Acute ¹⁷¹
Thrombus Aspiration^c	TOTAL ¹⁵⁹ , TASTE ¹⁵⁷

Enoxaparin	ATOLL ^{200,201} , Meta-analysis ²⁰²
Early Hospital Discharge^d	Small trials & observational data ²⁵⁹⁻²⁶²
Oxygen when SaO ₂ <95%	AVOID ⁶⁴ , DETOX ⁶⁶
Oxygen when SaO ₂ <90%	
Dose i.V. TNK-tPA same in all patients	STREAM ¹²¹
Dose i.V. TNK-tPA half in Pts ≥75 years	

2017 NEW RECOMMENDATIONS

- Additional lipid lowering therapy if LDL >1.8 mmol/L (70 mg/dL) despite on maximum tolerated statins
IMPROVE-IT³⁷⁶, FOURIER³⁸²
- Complete revascularization during index primary PCI in STEMI patients in shock
Expert opinion
- Cangrelor if P2Y₁₂ inhibitors have not been given
CHAMPION¹⁹³
- Switch to potent P2Y₁₂ inhibitors 48 hours after fibrinolysis
Expert opinion
- Extend Ticagrelor up to 36 months in high-risk patients
PEGASUS-TIMI 54³³³
- Use of polypill to increase adherence
FOCUS³²³
- Routine use of deferred stenting
DANAMI 3-DEFER¹⁵⁵

**Thrombus aspiration: not recommend
for routine primary PCI**

Standardized Technique?

Thrombectomy protocol in TOTAL trial

- Suction started before it crossed the lesion.
- Thrombectomy catheter be passed through the lesion multiple times such that a minimum of 40 ml blood aspiration.
- Guide catheter be fully engaged.
- After thrombectomy, the guide catheter was to be aspirated.

TOTAL. Multiple lesion pass. Forward aspiration

After aspiration: Distal embolization

Final result after IIb/IIIa: MBG 2

Modified Thrombus Aspiration Technique

- ACT > 250
- Starting proximal to the occlusion
- Avoid forward lesion cross (no blood aspiration, no advance)
- Cather pull back and backward aspiration
- Removing aspiration catheter and flushing
- Guiding catheter aspiration.

Aspiration catheter pull back: backward aspiration

Immediate after aspiration and stent: no embolization

Post Balloon distal embolization: Backward aspiration

Huge thrombus migration

Backward Aspiration

Comparison between forward and backward thrombus aspiration in primary percutaneous coronary intervention

Single center propensity matched data

Insights from TOTAL (Distal embolization)

No. at risk	Months of follow-up						
	0	1	2	3	4	5	6
With distal embolization	143	134	133	133	132	132	132
Without distal embolization	1460	1431	1424	1420	1420	1416	1413

Distal embolization and mortality

Conclusion

- Comparing with conventional forward aspiration, backward aspiration thrombectomy technique shows trend toward decreased distal embolization.
- We should reevaluated thrombus aspiration in primary PCI under standardized technique to prevention and management of thrombotic complication.
